Marking guide and answer key

CONTROLLED DOCUMENT

Instructor copy — not for distribution to learners

This key covers the diagnostic exercise, the six module knowledge checks, the final written assessment and its parallel reassessment form. Keep it separately from learner papers at all times.

Diagnostic exercise — answers

#	Answer
1	A. Personal protective equipment
2	C. The employer and every employee
3	B. Did not cause harm but had the potential to
4	B. Ministry of Labour, Industrial Relations and Employment Creation
5	B. Evacuate by the nearest safe route
6	A. Anything with the potential to cause harm
7	C. Removing the hazard entirely
8	B. Manual handling tasks
9	C. Water
10	A. Report it and get first aid

The diagnostic is not scored. Record the class pattern: clusters of wrong answers on questions 4, 6 and 7 signal that legal duties and the hierarchy need extra time in Modules 2 and 4.

Module knowledge checks — answers

Module 1 What occupational safety is and why it matters

#	Accepted answer
1	Hazard: anything with the potential to cause harm. Risk: the chance that the harm occurs and how serious it would be.
2	A. The Labour Act, 2007 (Act No. 11 of 2007)
3	B. A near miss that should be reported
4	Unsafe conditions and unsafe acts.
5	B. Ministry of Labour, Industrial Relations and Employment Creation

Module 2 Legal duties of employers and employees

#	Accepted answer
1	B. The employer
2	The Employees' Compensation Fund, administered by the Social Security Commission.
3	B. A legal duty of the employee
4	B. Pending enactment, not yet law
5	Any three: safe premises/plant; safe systems of work; information, instruction, training and supervision; PPE at no cost; emergency and first-aid arrangements.

Module 3 Hazard identification and reporting

#	Accepted answer
1	Physical, chemical, biological, ergonomic, psychosocial, mechanical/safety.
2	Stop, Look, Assess, Manage.
3	Mechanical/safety (vehicle movement) and, arguably, ergonomic or psychosocial factors if it reflects rushed systems; mechanical/safety is the essential answer.
4	Any sentence that names location, hazard, who is exposed, and a suggested fix.

#	Accepted answer
5	B. The immediate supervisor

Module 4 Personal protective equipment: what, when, how

#	Accepted answer
1	Elimination, substitution, engineering controls, administrative controls, PPE.
2	It protects only the wearer, only when worn correctly and in good condition, and it depends on human behaviour every time.
3	B. Engineering control
4	Any two of: headache, heavy then reduced sweating, dizziness, nausea, cramps, irritability.
5	B. Replace it

Module 5 Emergency procedures

#	Accepted answer
1	How the alarm is raised, how people leave, where they gather, who takes charge.
2	B. Stay out and report to roll call
3	B. Foam, dry powder or carbon dioxide
4	Pull, Aim, Squeeze, Sweep.
5	Location, what happened, number and condition of people injured.

Module 6 Manual handling and basic ergonomics

#	Accepted answer
1	Task, Individual, Load, Environment.
2	B. The leg muscles
3	Any two: screen top at eye level, arm's-length screen distance, forearms horizontal, feet flat, document holder, glare control.
4	B. Team lift or mechanical aid

#	Accepted answer
5	They let overloaded tissues recover before strain accumulates into injury.

Final written assessment — answer key

#	Type	Mark	Answer and required elements
1	Short	1	Anything with the potential to cause harm (contains: potential + harm).
2	Short	1	Unsafe conditions and unsafe acts.
3	MCQ	1	A. The Labour Act, 2007 (Act No. 11 of 2007)
4	MCQ	1	B. The health and safety of employees at work
5	MCQ	1	A. The Employees' Compensation Fund administered by the Social Security Commission
6	MCQ	1	B. Pending enactment and not yet law
7	MCQ	1	A. A legal duty of every employee
8	Short	1	Physical, chemical, biological, ergonomic, psychosocial, mechanical/safety.
9	MCQ	1	A. Stop, Look, Assess, Manage
10	Short	1	Any sentence containing: location (staff kitchen), hazard (frayed cable), exposed people, and a suggested fix (replace/remove).
11	MCQ	1	B. Last, after elimination, substitution, engineering and administrative controls
12	MCQ	1	A. An engineering control
13	MCQ	1	B. Replaced
14	Short	1	Any two: shade rotation, water provision, task rotation through hottest hours, scheduled breaks.
15	MCQ	1	A. Alarm, exit route, assembly point, person in charge
16	MCQ	1	B. The person in charge declares the all-clear
17	MCQ	1	B. Flammable liquid fires
18	MCQ	1	A. Task, Individual, Load, Environment

#	Type	Mark	Answer and required elements
19	MCQ	1	B. The leg muscles
20	Short	1	Any two: screen top at eye level, arm's-length distance, forearms horizontal, feet flat, document holder, glare control.

Marking rules: one mark per question; no half marks. A short answer earns the mark when it contains the listed elements, regardless of wording or spelling. Answers that are correct but incomplete score zero and should prompt a spoken follow-up during feedback. Pass: 16 of 20.

Parallel reassessment form

Administer the parallel form by substituting these items for questions 2, 8, 10, 14 and 20; the remaining fifteen items are reused unchanged after a minimum of one month has passed:

Replaces Q	Parallel item	Answer
2	State the difference between an unsafe condition and an unsafe act, with one example of each.	Condition = physical state (broken guard); act = human behaviour (reaching into running machine).
8	Name any four of the six hazard categories.	Any four of: physical, chemical, biological, ergonomic, psychosocial, mechanical/safety.
10	Write a one-sentence hazard report for a diesel spill the size of a dinner plate in a workshop walkway.	Must contain: location, spill, exposure, suggested fix (absorb and clear / report).

Replaces Q	Parallel item	Answer
14	Name two items of PPE you inspect before each use, and one fault that would fail each.	Any two with plausible faults, e.g. hard hat (crack/impact), boots (sole wear), gloves (tear).
20	List two signals of heat exhaustion and the first response.	Any two signals (headache, dizziness, heavy/reduced sweating, cramps, nausea) + rest in shade, cool fluids.

Recording and feedback

Enter results on the Assessment Results Register (Form OSA-F10) on the day of marking. Communicate results to learners within five working days. Where a learner fails, the reassessment date is offered in the same communication, with a one-paragraph note of the weak areas identified. Feedback to the whole cohort on frequently missed questions forms part of the course completion report (Form OSA-F14).
