Document Control

This document is a controlled publication of the Oryx Safety Academy. The table below records its version, ownership and review status as required by the Oryx Safety Academy Curriculum Development, Research, Academic Writing and Publication Standards Manual.

Field	Record
Document title	Level 1 Instructor Manual
Document reference	OSA-L1-INSTRUCTOR-MANUAL
Version	V1.0
Publication date	November 2026
Author	Tangi Iigonda — Principal and Founder
Document owner	Oryx Polytechnic Institute · Oryx Safety Academy
Reviewer	Pending technical review by a qualified Namibian safety professional (to be appointed)
Approval status	Draft for internal review — not yet approved for commercial delivery
Last review date	November 2026
Next review date	Within 12 months of publication, or on enactment of the pending Occupational Safety and Health Bill

About this instructor manual

This manual is for the course facilitator. It assumes the complete Level 1 Learner Manual and Learner Workbook are at hand; it does not repeat their content. It adds what the facilitator needs: timings, teaching notes, discussion prompts, demonstration instructions, equipment lists and assessment administration.

Field	Detail
Course	Level 1 — General Worker Safety Induction
Duration	One day (approximately 6.5 contact hours)
Cohort size	12 to 16 learners (per venue standard)
Lead instructor requirement	A Namibian safety professional with recognised credentials, for example Saiosh registration or SAMTRAC or equivalent, appointed under contract. Credentials and name are published on the course page. Oryx does not deliver safety training without a credentialed lead instructor.
Language	English (the language of Namibian regulation).

Instructor credit: where specialist instructors, reviewers or co-trainers participate, they are credited in the course completion report for their actual contribution. Authorship of the curriculum remains with Tangi Iigonda, Oryx Institute.

Delivery principles

Adult learners accept training when it visibly solves their daily problems. Every module therefore opens with a workplace problem, teaches the minimum needed to act, and closes with practice. Keep facilitation concrete: prefer one Windhoek warehouse example to three abstract ones. Handle experience respectfully: many Level 1 learners have more site time than the facilitator, and their stories are teaching material.

Question technique: after posing a question, wait a full seven seconds before rescuing the room. Redirect: “What did the mechanics among us see?” Never mock a wrong answer; wrong answers are diagnostic information about what still needs teaching.

Safety during the course itself: the venue risk assessment (Operational Forms Pack, Form OSA-F06) must be completed before the cohort. Practical lifts use

empty or light practice boxes; no learner lifts beyond personal comfort. Report any incident during training on Form OSA-F09.

Venue and equipment requirements

Category	Requirements
Room	Seats 12–16 cabaret-style with tables for workbook work; two exits; natural light preferred; wall space for flip charts.
Projection	Projector or large screen for the slide deck; printed deck as backup (print-friendly design supports 2-per-page grayscale printing).
Training aids	Sample hard hat (one per pair ideally, minimum three); pair of safety boots; hi-vis vest; practice lifting boxes 5–10 kg; frayed vs sound extension cable samples if available.
Stationery	Clipboards, pens, printed manuals and workbooks (issued at registration), evaluation forms, attendance register.
Refreshments	Water available all day; tea at the two breaks; lunch per enrolment terms.
Emergency	Venue evacuation route walked by facilitator beforehand; assembly point identified; first-aid provision confirmed on venue inspection checklist (Form OSA-F07).

Trainer preparation checklist

Complete the week before delivery:

☐ Venue booked and venue inspection checklist (OSA-F07) completed.

☐ Practical session risk assessment (OSA-F06) signed.

☐ Attendance register (OSA-F03) printed with enrolled names.

☐ Manuals, workbooks, clipboards, pens counted against enrolment.

☐ Training aids gathered and hard hats inspected for serviceability.

☐ Slide deck tested on venue equipment; printed backup carried.

☐ Assessment papers printed (one per learner) and answer key secured separately.

☐ Certificates of Attendance prepared for signature by Principal and lead instructor; verification numbering pre-registered (OSA-F11).

☐ Emergency numbers for the venue confirmed and written on the flip chart.

The day at a glance

Time	Session
08:00 – 08:20	Registration, materials issue (manual, clipboard, pen), icebreaker
08:20 – 09:20	Module 1 — What occupational safety is and why it matters
09:20 – 09:35	Break
09:35 – 10:30	Module 2 — Legal duties of employers and employees
10:30 – 11:40	Module 3 — Hazard identification and reporting (includes hazard hunt)
11:40 – 11:55	Break
11:55 – 12:50	Module 4 — Personal protective equipment (includes inspection exercise)
12:50 – 13:40	Lunch
13:40 – 14:35	Module 5 — Emergency procedures (includes escape-map exercise)
14:35 – 15:15	Module 6 — Manual handling and basic ergonomics (includes supervised lifts)
15:15 – 15:35	Revision: knowledge-check walkthrough and questions
15:35 – 16:20	Final written assessment (20 questions, 80% pass)
16:20 – 16:30	Evaluation forms, certificates of attendance, close

Module 1 What occupational safety is and why it matters — teaching plan

Segment	Content
08:20–08:35	Opening, icebreaker: one hazard you walked past this week

Segment	Content
08:35–09:00	Teaching blocks 1–2
09:00–09:20	Teaching block 3, activity, knowledge check

Teaching notes

- The icebreaker doubles as the baseline diagnostic: listen for the difference between hazard and risk in learners' own words.
- Use the cost block without moralising; numbers persuade, lectures do not.
- Keep the OSH Bill discussion to two minutes: pending, not law, watch the register.

Discussion questions

- Who has reported a near miss? What happened to the report?
- Why do workers walk past hazards they can see clearly?

Demonstration instructions

No physical demonstration scheduled for this module. Use the flip chart: compensation flow (Module 2), category grid (Module 3), fire class table (Module 5).

Module 2 Legal duties of employers and employees — teaching plan

Segment	Content
09:35–10:00	Employer and employee duties
10:00–10:15	Injury chain and compensation
10:15–10:30	Duty sorting activity, knowledge check

Teaching notes

- Do not quote section numbers from memory; the manual deliberately cites the Act and GN 156 at instrument level. If asked for exact sections, note the question and answer in writing after checking the Gazette text.

- The compensation chain is best drawn as a flow on the flip chart: injury → report → record → claim → fund.

Discussion questions

- A supervisor tells you to stand in an unstable trench to finish quickly. What are your options, in order?
- What stops workers reporting injuries on small sites?

Demonstration instructions

No physical demonstration scheduled for this module. Use the flip chart: compensation flow (Module 2), category grid (Module 3), fire class table (Module 5).

Module 3 Hazard identification and reporting — teaching plan

Segment	Content
10:30–10:55	Six categories + SLAM
10:55–11:30	Hazard hunt in pairs on the three scenarios
11:30–11:40	Report-writing practice, knowledge check

Teaching notes

- This is the heart of the day; protect its time.
- Insist on category labels in the hunt; sorting is the skill.
- Reject vague report sentences on the spot and ask for the four lines: what, where, who, fix.

Discussion questions

- Which of the three scenarios most resembles your workplace?
- Who reads hazard reports where you work, and what happens next?

Demonstration instructions

No physical demonstration scheduled for this module. Use the flip chart: compensation flow (Module 2), category grid (Module 3), fire class table (Module 5).

Module 4 Personal protective equipment: what, when, how — teaching plan

Segment	Content
11:55–12:15	Hierarchy of control
12:15–12:35	Matching PPE to hazards, sun and heat
12:35–12:50	Inspection exercise, knowledge check

Teaching notes

- Pass hard hats around during the hierarchy discussion, not after; handling increases questions.
- Demonstrate the suspension and date stamp on a real hat.
- The heat block matters for outdoor cohorts; ask for their own signals.

Discussion questions

- What PPE at your workplace is wrong for the job, and what is missing?
- Why do workers sometimes not wear the PPE they are given?

Demonstration instructions

Hard hat: show the shell, the suspension cradle and the adjustment; find the manufacture date stamp with the learners. Boots: flex the sole, show toecap and midsole. Vest: show retro-reflective strips under a phone torch against plain fabric to demonstrate the difference.

Module 5 Emergency procedures — teaching plan

Segment	Content
13:40–14:05	Emergency planning, alarm response

Segment	Content
14:05–14:25	Fire classes and media at awareness level
14:25–14:35	Escape-map exercise, knowledge check

Teaching notes

- State clearly that extinguisher practice is Level 2 / provider-delivered; awareness here is classification and correct first actions.
- If the venue allows, walk the actual evacuation route as the exercise rather than only sketching it.
- Roll-call story (manual Module 5 example) is worth telling in full.

Discussion questions

- What is your workplace's actual alarm signal? Does everyone on your shift know it?
- Where does your visitor book go during an evacuation?

Demonstration instructions

No physical demonstration scheduled for this module. Use the flip chart: compensation flow (Module 2), category grid (Module 3), fire class table (Module 5).

Module 6 Manual handling and basic ergonomics — teaching plan

Segment	Content
14:35–15:00	TILE, lifting technique
15:00–15:15	Supervised lifts + group judgements
15:15–15:35	Office ergonomics, revision begins

Teaching notes

- Demonstrate one correct floor-height lift yourself before partner practice.
- Stop any learner load beyond 10 kg or any awkward lift; the teaching point is the decision, not the load.

- Ergonomics closes the content: connect rotation and breaks back to the hazard categories.

Discussion questions

- What is the worst manual-handling task at your site, and what would TILE change?
- Who sets your chair and screen height, and when last did it change?

Demonstration instructions

One facilitator lift at waist height and one from the floor, narrating each of the eight checkpoints aloud. Then partner practice with 5–10 kg boxes; observers use the workbook checklist.

Assessment administration

The final written assessment runs 15:35–16:20 (45 minutes allowed; most learners finish within 25). Conditions: individual work, closed manual, one question read aloud per learner request is permitted, no discussion. Invigilation by the lead instructor; a second responsible adult is present where practicable.

Marking: against the answer key only; half-marks are not awarded; a short answer earns the mark if it contains the required elements listed in the key. Pass mark 16 of 20 (80%). Results are recorded on the Assessment Results Register (OSA-F10) and communicated within five working days.

Reassessment: one reassessment is included. It uses the parallel form in the answer key pack, is administered on a different day, and follows the same conditions. A second failure requires the learner to repeat the course before reassessment.

Moderation: before first commercial use, and annually, a competent person other than the author reviews the assessment, its key and a sample of marked papers. Records are kept with the quality file. Where no second competent person is available, this is recorded as an open item on the quality register rather than claimed as done.
