Marking guide and answer key

CONTROLLED DOCUMENT

Instructor copy — not for distribution to learners

This key covers the fifty-question written examination and the practical rubric administration. Keep it separately from learner papers. Module knowledge-check answers are in the learner manual's companion key sections; this document is the examination authority.

Written examination — answer key

#	Type	Mark	Answer / required elements
1	MCQ	1	A. The Labour Act, 2007 with GN 156 of 1997
2	Short	1	Any three: enter and inspect at reasonable times; take photographs/samples; question persons; require production of records; issue instructions.
3	MCQ	1	B. Before Parliament, not yet law
4	Short	1	The Employees' Compensation Fund, under the Employees' Compensation Ordinance of 1946 as amended, administered by the Social Security Commission.
5	MCQ	1	B. Contractual or voluntary good practice, not Namibian law
6	Short	1	Specific statement naming activity, person, fall distance and surface, e.g. “worker stacking pallets at unguarded edge, 2.8 m fall onto concrete”.
7	MCQ	1	C. Stopping work until controlled
8	Short	1	Engineering protects everyone, continuously, without depending on behaviour; PPE protects one wearer, only when correctly worn and serviceable.
9	MCQ	1	B. The risk remaining after controls
10	Short	1	Any four: change of process, equipment, chemicals or people; incident or serious near miss; fixed interval; client or regulatory change.
11	MCQ	1	B. Treat and protect people, control the scene, notify, capture perishable evidence

#	Type	Mark	Answer / required elements
12	MCQ	1	B. A management system fault
13	MCQ	1	B. The police and labour inspectorate once involved; nothing moves until release
14	Short	1	A named owner, a date, and a verification step confirming completion.
15	Short	1	Near misses reveal the same system faults at no injury cost; fixing them prevents the injury that the same fault will eventually cause.
16	MCQ	1	B. The site's risk assessments
17	MCQ	1	B. Retired permanently
18	Short	1	That the helmet met the EN 397 laboratory specification at manufacture; nothing about suitability for a specific hazard, current condition, or Namibian legal requirement.
19	Short	1	Before-use check by the trained wearer; scheduled periodic inspection by a competent person, recorded.
20	MCQ	1	A. Roles, hazards, specified equipment and standards
21	Short	1	How the alarm is raised; the routes; the assembly point and roll call; the roles with alternates; communications.
22	MCQ	1	B. Flammable liquid and cooking-oil fires
23	Short	1	Monthly recorded visual check (gauge, seal, access, signage); annual competent servicing, recorded.
24	MCQ	1	C. Carbon dioxide or dry powder
25	Short	1	A syllabus, an observer with checklist and stopwatch, and a written debrief with dated actions.
26	MCQ	1	A. At awareness level only; certification comes from the registered partner
27	MCQ	1	B. Cool water for a sustained period
28	MCQ	1	B. Reinforced on top without removal
29	Short	1	Any three: summoning trained help fast; clearing access for responders; recording the event; notifying per procedure; arranging aftercare and review.
30	MCQ	1	B. Equipped boxes scaled to the workforce with trained cover where required, and records

#	Type	Mark	Answer / required elements
31	MCQ	1	B. Do not exist; the Labour Act and GN 156 apply, with SA instruments as contractual good practice
32	Short	1	Any four: missing ties; missing guardrails; incomplete boarding; missing or invalid tag; mixed components; damaged components; unsafe access.
33	Short	1	A rescue plan, because suspension trauma can kill within minutes.
34	MCQ	1	B. Support or battering, edge protection, spoil set back, daily competent inspection
35	Short	1	Any four: competent connections; closed, labelled, earthed boards; RCD protection on tool supplies; leads routed undamaged; user checks plus scheduled inspection/testing; lock-off isolation.
36	Short	1	What we are doing; the one hazard; how we work safely; who checks; a closing question.
37	MCQ	1	B. At the workface with the hazard visible
38	Short	1	Actions from previous meetings evaporating without review.
39	MCQ	1	B. Live site information: near misses, inspections, new crews and equipment
40	Short	1	Fear or futility rather than agreement; respond with small safe questions and visible action on the first answers.
41	Short	1	Any eight: policy and organisation; risk assessments; safe work procedures; training register; inspection records; incident and near-miss records; emergency plan and drills; PPE matrix and issues; plant list and maintenance; permit book; contractor and visitor records; correspondence; index and document control.
42	MCQ	1	B. It is trusted and followed while misleading
43	Short	1	Any four: hot work; work at height; confined-space entry; live electrical work; excavation near services.
44	MCQ	1	B. A breakdown in permit discipline requiring investigation and re-issue of the rule
45	Short	1	A stranger, successor or auditor can reconstruct the site's safety story from the indexed, current file within ten minutes.

#	Type	Mark	Answer / required elements
46	Short	1	Any four: last walkthrough report and action status; recent near misses; today's open permits; new crews or equipment; relevant inspection records.
47	MCQ	1	B. Findings communicated in the moment are fixed in the moment, converting inspection into ownership
48	MCQ	1	C. Stop, cleared immediately and recorded
49	Short	1	Reports listing only failures teach sites to hide; recognition keeps reporting honest and supports morale.
50	Short	1	Reviewed aloud against owners and dates; unclosed items re-tabled with consequences.

Marking rules: one mark per question; no half marks. Short answers earn the mark when the listed elements appear, regardless of order or wording; spelling never costs a mark. Answers correct but incomplete score zero and warrant a spoken follow-up at feedback. Pass: 40 of 50 (80%).

Parallel reassessment substitutions

For reassessment, substitute these ten items for questions 2, 6, 12, 16, 21, 26, 33, 37, 41 and 47; the remaining forty are reused after a minimum of one month. The parallel form is administered under identical conditions.

Replaces Q	Parallel item	Answer
2	List the three documents you would have ready before an inspector's visit, and say why each matters.	Any sensible trio with reasons, e.g. training register (competence evidence), inspection records (system working), incident records (response history).

Replaces Q	Parallel item	Answer
6	Write a hazard statement for a telehandler reversing in a pedestrian yard with no banksman.	Specific statement: activity, vehicle, persons exposed, credible consequence (crush/impact).
12	An incident chain ends at “the defect list had no owner and no deadline”. What does this reveal, and what is the corrective action?	An underlying system fault; corrective action with owner, date and verification, e.g. maintenance scheduling standard with response times.
16	Who signs PPE issue records, and what three fields must every issue carry?	Employee and issuer; item/specification, date, condition (or size, replacement date).
21	Your site alarm is the shift siren. Why is that a problem, and what is the fix?	Ambiguity with routine signals; distinct emergency sound, tested weekly, briefed to all including visitors.
26	Name the certification route for First Aid Level 1 on Oryx-linked sites, and what this course's module does and does not provide.	Registered Namibian first-aid training partner certifies; this module provides management and awareness only.

Replaces Q	Parallel item	Answer
33	Why does a ladder stop being acceptable after about thirty minutes of task time?	Fatigue and handling risk; a platform is the correct control for sustained tasks at height.
37	Your toolbox talk topic is “the new bench grinder”. Write your closing question.	Any genuine question inviting crew experience, e.g. “What is the first thing you will check before your first cut tomorrow?”
41	A client asks for your safety file index before the audit. What does the index prove, and what does it not prove?	Proves organisation and completeness of documents; proves nothing about implementation on the ground.
47	During your walkthrough the crew reports a problem you cannot classify. What do you do?	Record it as a finding with the crew's words; classify after consultation; never dismiss an unclassifiable report.

Practical rubric administration

Assessors mark against the published rubrics only, marking the whole criterion, not impressions. Two assessors are used for the toolbox talk where staffing permits; where one assesses, moderation samples recordings or observation sheets. “Competent” is the pass bar on every criterion; one “developing” mark on a rubric is a re-brief and re-assessment opportunity within thirty days, recorded on the results register. The walkthrough report is marked blind where practical, before the observation notes are consulted, then reconciled.

Moderation and records

Before first commercial delivery and annually, a competent person other than the author reviews the examination, key, rubrics and a sample of marked work. Results are entered on the Assessment Results Register (OSA-F10) on the day of marking. Learner feedback on frequently missed questions feeds the course completion report and the next revision of the manual.
