Assessment instructions for learners

Field	Detail
Course	Level 2 — Safety Representative and Site Safety Officer
Components	Written examination (50 questions); practical risk assessment; assessed toolbox talk; observed site walkthrough
Written examination	Day 5, 105 minutes, closed book, 50 questions, 50 marks (30 multiple-choice, 20 short answer)
Pass requirement	Written examination 80% (40 of 50) and “competent” on all three practical rubrics
Rubrics	Published in this pack; you see the marking criteria before you are assessed
Reassessment	One parallel written form and one repeat practical opportunity, included in the fee, within 30 days
Results	Within five working days of the final component

Answer short questions in the spaces provided; required elements are listed in the answer key, and wording is your choice. For multiple-choice questions, write the letter clearly. Answer every question: there is no negative marking.

Final written examination

1. The operative core of Namibian employee health and safety law is…

A. The Labour Act, 2007 with GN 156 of 1997
B. The OSH Act of 2014
C. SANS 10085

2. List any three things a labour inspector may lawfully do on a site visit.

Answer:

3. The Occupational Safety and Health Bill of 2024 is…

A. Enacted and in force
B. Before Parliament, not yet law
C. A SANS standard

4. Name the fund and the ordinance that govern compensation for Namibian work injuries.

Answer:

5. A SANS standard cited on a Namibian site is best described as…

A. Namibian statute
B. Contractual or voluntary good practice, not Namibian law
C. An ILO convention

6. Write a hazard statement (not a topic) for an unguarded mezzanine edge used for stacking pallets.

Answer:

7. On the course matrix, a hazard scored 3 x 5 = 15 requires…

A. Monitoring only
B. Control within the planning cycle
C. Stopping work until controlled

8. Explain in two sentences why the hierarchy of control places engineering above PPE.

Answer:

9. Residual risk means…

A. The risk before controls
B. The risk remaining after controls
C. The inspector's risk rating

10. List any four triggers that force a risk assessment review.

Answer:

11. The correct first-hour order after an incident is…

A. Notify, treat, photograph, secure
B. Treat and protect people, control the scene, notify, capture perishable evidence
C. Clean up, then investigate

12. The five-whys chain stops when it reaches…

A. A worker's admission of error
B. A management system fault
C. The fifth question, always

13. After a serious injury, the scene is controlled by…

A. The safety officer alone
B. The police and labour inspectorate once involved; nothing moves until release
C. The employer's insurer

14. What makes a corrective action real rather than aspirational?

Answer:

15. Give the two-sentence business case for a near-miss reporting programme.

Answer:

16. A PPE programme starts from…

A. The supplier catalogue
B. The site's risk assessments
C. What workers prefer

17. A harness that has arrested one fall must be…

A. Inspected and returned
B. Retired permanently
C. Kept as a spare

18. What does an EN 397 marking on a helmet actually tell you?

Answer:

19. Name the two PPE inspection rhythms and who owns each.

Answer:

20. The PPE matrix links…

A. Roles, hazards, specified equipment and standards
B. Suppliers to prices
C. Colours to departments

21. List the five questions every emergency plan answers.

Answer:

22. Water must never be applied to…

A. Solid fuel fires
B. Flammable liquid and cooking-oil fires
C. Textile fires

23. State the monthly and annual fire-equipment check regime.

Answer:

24. A live electrical fire in an enclosed switch room is best met with…

A. Water
B. Foam
C. Carbon dioxide or dry powder

25. What distinguishes a drill from a mere evacuation?

Answer:

26. This course's first-aid module certifies you…

A. At awareness level only; certification comes from the registered partner
B. As a First Aid Level 1 practitioner
C. As a first-aid instructor

27. A burn should be cooled with…

A. Ice
B. Cool water for a sustained period
C. Butter

28. A dressing soaked through by bleeding should be…

A. Removed and replaced
B. Reinforced on top without removal
C. Rinsed out and reapplied

29. Name any three system duties of the safety officer during a medical emergency.

Answer:

30. GN 156 of 1997 expects workplaces to provide…

A. Nothing first-aid specific
B. Equipped boxes scaled to the workforce with trained cover where required, and records
C. Hospital-level care on site

31. Dedicated Namibian construction safety regulations, equivalent to South Africa's 2014 Construction Regulations…

A. Exist since 2014
B. Do not exist; the Labour Act and GN 156 apply, with SA instruments as contractual good practice
C. Exist only for government projects

32. List any four scaffold faults that justify stopping work.

Answer:

33. Before the first harness clip-in at height, what must exist?

Answer:

34. Controls for a 1.2 m trench in loose soil beside a walkway include…

A. A warning sign only
B. Support or battering, edge protection, spoil set back, daily competent inspection
C. Nothing at that depth

35. List any four electrical arrangements the non-electrician safety officer verifies.

Answer:

36. Name the five structural elements of a toolbox talk taught in this course.

Answer:

37. The best location for a toolbox talk is…

A. The canteen
B. At the workface with the hazard visible
C. The site office

38. What kills a safety meeting fastest?

Answer:

39. The two best sources of toolbox topics are…

A. A generic calendar and the supplier catalogue
B. Live site information: near misses, inspections, new crews and equipment
C. The client's head office

40. A crew answers a closing question with silence. State the likely cause and one response.

Answer:

41. List any eight contents of a complete site safety file.

Answer:

42. A superseded procedure on the wall is worse than none because…

A. It takes up space
B. It is trusted and followed while misleading
C. It looks unprofessional

43. Name any four activities that typically require a permit to work.

Answer:

44. An un-closed permit in the book indicates…

A. Efficient paperwork
B. A breakdown in permit discipline requiring investigation and re-issue of the rule
C. Nothing significant

45. State the ten-minute test for a safety file.

Answer:

46. Name any four things to read before starting a walkthrough.

Answer:

47. The supervisor accompanies the walkthrough because…

A. Regulations demand it

B. Findings communicated in the moment are fixed in the moment, converting inspection into ownership
C. The officer needs protection

48. A blocked fire exit is classified as…

A. Monitor
B. Fix within the month
C. Stop, cleared immediately and recorded

49. Why record good practice in walkthrough reports?

Answer:

50. What happens to walkthrough actions at the next safety meeting?

Answer:

End of examination. Check you have answered all fifty questions.

Practical component briefs and rubrics

A. Practical risk assessment

Undertaken during Module 2 as a group exercise and evidenced individually on the workbook risk-assessment sheet. Scope: a defined activity or area, minimum six hazard statements, scored on the course matrix, controls selected in hierarchy order with reasons, residual scores, review triggers, assessor names and date. Submit the completed sheet by Day 2, 13:00.

Risk assessment rubric

Criterion	Not yet (0)	Developing (1)	Competent (2)
Hazard statements (weight 30)	Topics or vague phrases; no activity, person or consequence	Some specific statements; mixed with topics	All statements specific: activity, person, fall or exposure, consequence
Scoring (weight 15)	Scores arbitrary or missing	Scores mostly defensible; occasional drift	Scores defensible from worst credible outcomes; bands applied correctly

Criterion	Not yet (0)	Developing (1)	Competent (2)
Controls (weight 30)	PPE first and only	Hierarchy attempted; jumps without reasons	Hierarchy worked in order with reasons; PPE interim only with dated engineering action
Documentation (weight 15)	No owners, dates or triggers	Partial owners or dates	Owners, dates, review triggers and assessors complete
Usability (weight 10)	Cannot be followed by a third party	Followable with effort	A supervisor could act on it unaided

B. Assessed toolbox talk (10 minutes)

Deliver a ten-minute toolbox talk on a safety topic drawn from live site information, to a small audience including the assessor. You may use one page of your own notes and the workface itself, real objects, or photographs. Announce your topic to the assessor by Day 4, 16:00.

Toolbox talk rubric

Criterion	Not yet (0)	Developing (1)	Competent (2)
Topic and focus (weight 20)	Generic topic; no site connection	Relevant topic; partially focused	Live topic; one hazard held throughout
Structure (weight 20)	Elements missing; talk drifts	Most elements present; sequencing weak	All five elements present and in order
Plain language (weight 20)	Jargon unexplained; acronyms assumed	Mostly plain; occasional lapses	Newest person in the room could follow all of it
Engagement (weight 20)	Read aloud; no interaction	Some eye contact; closing question weak	Talked to the room; strong closing question handled well

Criterion	Not yet (0)	Developing (1)	Competent (2)
Practical accuracy (weight 20)	Unsafe or incorrect guidance	Minor inaccuracies	Guidance correct and usable on site tomorrow

C. Observed site walkthrough

Conducted on Day 5 at the partner site or the simulated circuit. Duration approximately 90 minutes. You plan, walk, communicate and report; the written report is submitted within 24 hours on the workbook sheet. The rubric below is the assessor's observation sheet.

Walkthrough rubric

Criterion	Not yet (0)	Developing (1)	Competent (2)
Preparation (weight 15)	Walks cold	Reads some records	Reads prior report, near misses, permits; route planned for live work
System (weight 20)	Random wander; memory-dependent	Partial pattern; areas missed	Fixed pattern; high, low, behind, and moving covered
Own safety and courtesy (weight 15)	Takes risks; interrupts work unsafely	Generally safe; awkward	Models safe conduct; consults crew respectfully
Classification (weight 20)	Cannot distinguish stop from monitor	Hesitant; over- or under-reacts	Stop, fix, monitor decisions sound and justified
Communication (weight 15)	Findings hoarded or vague	Tells supervisor, imprecisely	Crew and supervisor informed on the spot, precisely and without blame
Written report (weight 15)	Late, thin, no owners	Same-day; partial actions	Same-day, specific findings, owners, dates; closes the loop
