About this instructor manual

This manual accompanies the Level 2 Learner Manual and Workbook and assumes both are at hand. It covers the five-day delivery plan, teaching notes per module, coordination of the qualified providers who deliver the practical sessions, equipment and venue requirements, and assessment administration including moderation.

Field	Detail
Course	Level 2 — Safety Representative and Site Safety Officer
Duration	Five days (approximately 33 contact hours including practical walkthrough)
Cohort size	12 to 16 learners
Lead instructor	A Namibian safety professional with recognised credentials (Saiosh registration, SAMTRAC or equivalent), contracted and named on the course page. Non-negotiable: Oryx does not deliver safety training without a credentialed lead instructor.
Assessment	Written examination 50 questions (80%), practical risk assessment, assessed toolbox talk, observed walkthrough. Rubrics published to learners in advance.

Provider and partner coordination

Arrangement	Requirements
Fire practical	Qualified fire-training provider delivers the live extinguisher session on Day 3 morning. Provider's own safety plan and insurance confirmed in writing; fuel, trays and extinguishers are the provider's; venue requires an outdoor burn area cleared per the provider's specification. Attendance is recorded and required for course completion; learners absent for the practical complete it at the provider's next session before certification.
First-aid partner	First Aid Level 1 certification is a separate partner-delivered programme. Level 2 teaches awareness and management only. Where learners ask about certification, hand out the partner's enrolment information; do not improvise promises.

Arrangement	Requirements
Walkthrough site	Partner site under a signed arrangement (MOU): agreed date, escort, areas out of bounds, photography rules, incident procedure while on their property. Where no partner site is available in a given week, the simulated site circuit is used and the substitution is recorded on the delivery record. Never take a cohort onto a working site informally.

Venue and equipment

Category	Requirements
Room	Cabaret seating for 12–16 with tables; wall space for flip charts; projector or screen; two exits.
Course aids	GN 156 printed extracts; sample PPE (helmets, boots, gloves, harness with tag); scaffold photograph pack; incident scenario packs; document pack for the safety-file exercise; first-aid box with contents schedule; site plans for the emergency exercise.
Stationery	Manuals, workbooks, clipboards, pens, green hard hats issued at registration, evaluation forms, attendance register.
Assessment	Examination papers (secure before administration), answer key held separately, rubrics issued to learners on Day 1 as required.

Trainer preparation checklist

☐ Fire-training provider confirmed in writing for Day 3, burn area arranged with the venue.

☐ Partner site walkthrough confirmed with escort named, or simulated circuit built and recorded as substitution.

☐ Scaffold photograph pack printed; PPE samples inspected and tagged for training use.

☐ Scenario packs and document pack copied for each group.

☐ Green hard hats branded plate fitted (minimal Oryx mark only), counted against enrolment.

☐ Examination papers printed and secured; answer key separated; rubrics ready for Day 1 issue.

☐ Certificates of Completion prepared with verification numbers pre-registered.

☐ First-aid partner information sheets available for the Module 6 questions that always come.

The five days at a glance

Day	Time	Session
Day 1	08:00 – 10:00	Registration, materials issue (manual, workbook, clipboard, pen, green hard hat), diagnostic
Day 1	10:00 – 10:20	Break
Day 1	10:20 – 13:00	Module 1 — The Namibian occupational safety framework in depth
Day 1	14:00 – 17:30	Module 2 — HIRA, with the crate-wash bay group assessment exercise
Day 2	08:00 – 10:30	Module 3 — Incident investigation and reporting
Day 2	10:50 – 13:00	Module 4 — PPE inspection and management
Day 2	14:00 – 15:30	Module 4 continued — registers and audit exercise; module knowledge checks 1–4
Day 2	15:30 – 17:30	Module 5 (part 1) — Emergency planning and drills
Day 3	08:00 – 10:30	Module 5 (part 2) — Fire science, equipment regime; extinguisher theory
Day 3	10:50 – 13:00	Practical extinguisher session — delivered by the qualified fire-training provider (attendance required for course completion)
Day 3	14:00 – 16:30	Module 6 — First aid awareness (partner certification arrangements)
Day 3	16:30 – 17:30	Guided revision and workbook time
Day 4	08:00 – 11:30	Module 7 — Construction-site safety, scaffold photograph exercise
Day 4	11:50 – 13:00	Module 8 — Toolbox talks and safety meetings, two-minute practice talks
Day 4	14:00 – 16:00	Module 9 — Safety files and site documentation, assemble-and-audit exercise

Day	Time	Session
Day 4	16:00 – 17:30	Walkthrough briefing, rubric walkthrough, report-writing clinic
Day 5	08:00 – 11:00	Module 10 — Practical site walkthrough assessment (partner site or simulated circuit)
Day 5	11:20 – 12:30	Walkthrough reports written and submitted; feedback
Day 5	12:30 – 13:00	Lunch
Day 5	13:15 – 15:00	Final written examination (50 questions, 80% pass)
Day 5	15:15 – 16:30	Toolbox-talk deliveries (assessed, 10 minutes each) — where scheduling requires, deliveries continue by arrangement
Day 5	16:30 – 17:00	Evaluation forms, certificates, close

Module 1 The Namibian occupational safety framework in depth — teaching plan

Teaching notes

- Open with the audit anecdote from the worked example; it sets the precision tone for the week.
- Distribute GN 156 extracts early and use them physically: learners tab provisions during the module.
- The source-or-opinion exercise exposes confident misinformation; treat wrong answers warmly and correct with the source.

Discussion questions

- Which safety “rules” on your site are actually law, contract, or habit?
- What would you want ready before an inspector arrives tomorrow?

Module 2 Hazard identification and risk assessment (HIRA) — teaching plan

Teaching notes

- Protect the group exercise time; it is the heart of the day.
- Enforce hazard statements over topics ruthlessly; every vague statement gets one coaching question.
- Score disputes are teaching moments: ask for the credible worst outcome, then the score.
- Introduce the matrix with the printed table; colour bands are labelled for print and colour-blind access.

Discussion questions

- Who signs risk assessments where you work, and has anyone ever read one aloud to the crew?
- Where does PPE appear first in your site's assessments before engineering is tried?

Module 3 Incident investigation and reporting — teaching plan

Teaching notes

- The acid-drum scenario's supervisor pressure mirrors real sites; let groups feel the tension before concluding the client comes second to the scene.
- Five-whys chains stall at blame; push one more why every time a person is blamed.
- Introduce the compensation flow from the flip chart; learners photograph it, which is fine.

Discussion questions

- What is the last near miss on your site that reached paper?
- What happens to reports after they are handed in, honestly?

Module 4 PPE inspection and management — teaching plan

Teaching notes

- Harness after a fall is retirement: run the tag exercise with a real harness and a real register page.
- EN markings exercise works best with physical samples; pass them around during the matrix block.
- The audit rebuild story lands well with supervisors in the room; use it.

Discussion questions

- Where is your site's issue register right now, physically?
- Which item of PPE on your site would fail an honest inspection today?

Module 5 Emergency preparedness and fire safety — teaching plan

Teaching notes

- The Outjo lodge plan story is the five questions in narrative form; tell it before the group planning.
- Fire chemistry demos: a candle and a glass, if the venue permits, beats slides.
- Before the provider session, rehearse PASS and the media matrix verbally; the practical then confirms vocabulary with muscle memory.

Discussion questions

- When did your site last drill, and was there a debrief?
- Which exit would a visitor follow tonight?

Module 6 First aid awareness — teaching plan

Teaching notes

- State the certification boundary in the first minute and again at the end; it is the module's most-remembered sentence.
- The box audit's forgotten fields (restock date, checker signature) are the point; let groups miss them.
- DRSABCD is named for context, not taught as skill; do not let the room believe awareness equals competence.

Discussion questions

- Who are the certified first aiders on each shift where you work?
- What is in your first-aid box that is expired right now?

Module 7 Construction-site safety — teaching plan

Teaching notes

- The scaffold photograph exercise is assessed-adjacent; insist on stop-work vs monitor judgement with reasons.
- The Namibian/SA standards distinction from Module 1 recurs here; enforce the honest labelling habit.
- Trench collapse physics: a 1.2 m trench in loose soil is lethal; confront the “shallow is safe” myth directly.

Discussion questions

- What is the worst ladder habit on your site?
- Where do plant and people share space without separation?

Module 8 Toolbox talks and safety meetings — teaching plan

Teaching notes

- Model a deliberately bad toolbox talk first (reading a generic topic, back to the crew); learners diagnose it, which is faster than lecturing.

- The two-minute practice talks give every learner one rep before the assessed ten-minute version; keep time strictly.
- Watch for the silence discussion; it is the module's emotional centre for reps from hostile sites.

Discussion questions

- What did the best safety talk you ever heard do differently?
- What would make your crew stop reporting?

Module 9 Safety files and site documentation — teaching plan

Teaching notes

- The assemble-and-audit exercise needs the shuffled document pack; prepare it carefully, the gaps tell the story.
- Permit closure: the un-closed permit in the worked example is the hook; ask what it says about the site.
- Learners photograph the file index; encourage it, their first file starts this week.

Discussion questions

- Where is your site's file and who controls it?
- Which register on your site is a fiction?

Module 10 The practical site walkthrough — teaching plan

Teaching notes

- Walk the route yourself the day before; re-tag anything unsafe for training.
- Assess silently during the walk; feedback comes after reports are submitted, per the rubric.
- The report clinic on Day 4 afternoon is the safety valve for writing anxiety; share two strong anonymised reports from past cohorts.

Discussion questions

- What will you check first when you walk your own site next week?

Assessment administration

Written examination: Day 5, 13:15–15:00, 50 questions, closed book, invigilated by the lead instructor with a second responsible adult present. One question may be read aloud per learner request. Papers are marked within two working days against the answer key only.

Practical components: the risk-assessment exercise (Day 1 group version, individual workbook sheet as evidence), the assessed ten-minute toolbox talk (Day 5 or by arrangement), and the observed walkthrough (Day 5 morning). Rubrics were issued to learners on Day 1. Toolbox-talk scheduling that overruns the day continues by arrangement within the week; record any such arrangement on the delivery record.

Pass requirements: written examination at 80% (40 of 50), and “competent” on each of the three practical rubrics. A learner may pass the written and fail a practical component; only completed components are recorded and certification waits for all four. Reassessment: one parallel written form and a repeat practical opportunity are included in the fee, scheduled within thirty days.

Moderation: before first commercial delivery and annually thereafter, a competent person other than the author reviews the examination, its key, the rubrics, and a sample of marked papers and observation records. Where no second competent person is available, the gap is recorded as an open item on the quality register; it is never claimed as done. Results reach learners within five working days.
