ORYX 理工 INSTITUTE

ADVANCED SAFETY MANAGEMENT

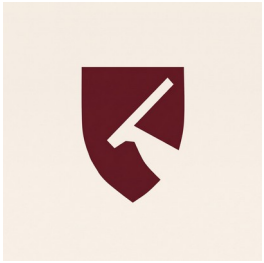

# Level 3 Assessment Pack

*Module examinations and assignment briefs — learner copy*

Eight module examinations · 75% pass

Two assignments with published rubrics

Parallel reassessment forms available

# Assessment instructions for learners

| Field | Detail |
|---|---|
| Programme | Level 3 — Advanced Safety Management |
| Components | Eight module examinations plus two practical assignments |
| Module examinations | One per module, 8 questions each, 30 minutes, closed book, sat at the end of each module block |
| Pass requirement | 75% (6 of 8) on each module examination; competent grading on both assignments |
| Assignments | Management-system assignment (Module 1) and practical audit report (Module 7), due three weeks after the final module day |
| Reassessment | One parallel module-examination form per failed module, within 30 days; one assignment re-submission opportunity |
| Results | Within five working days of each component |

# Module 1 examination — SHEQ management systems and ISO 45001 principles

**1. Map the seven ISO 45001 clause families onto PDCA.**

Answer:

**2. A legal register that lists only the Labour Act is missing, at minimum…**

A. Nothing further exists

B. Licence conditions, client standards, voluntary commitments, and the pending OSH Bill flagged as pending

C. Only ISO standards

**3. Name the three most common Namibian gap-analysis findings named in this module.**

Answer:

**4. Systems outperform campaigns because…**

A. They are cheaper

B. They persist through turnover and fashion by fixing ownership, competence, measurement and correction

C. Regulators prefer them

**5. Write an objective for a management-system programme that meets the owner-date-verification standard.**

Answer:

**6. Certification to ISO 45001 in Namibia is…**

A. Mandatory for employers
B. A voluntary commercial decision; clients may write it into contracts
C. Granted by the NTA

**7. The gap-analysis prioritisation dimension taught here ranks gaps by…**

A. Alphabetical order
B. Risk and effort
C. Management preference

**8. What does the planning clause family require beyond hazard identification?**

Answer:

*End of module examination.*

# Module 2 examination — Construction safety requirements in depth

**1. The cheapest stage to remove a construction hazard is…**

A. During construction
B. At design review
C. At handover

**2. List the five elements of a method statement that survives site contact.**

Answer:

**3. Temporary works must be…**

A. Built strong by experienced crews
B. Engineered items: designed/selected by a competent person, checked before first load, inspected on a rhythm
C. Replaced by faster methods

**4. Write the three design-review questions a safety manager should ask of any drawing.**

Answer:

**5. A written lifting plan states, at minimum…**

Answer:

**6. The construction-phase rhythm includes…**

A. A monthly safety day
B. Induction, daily high-risk briefings, weekly inspections, permits, coordination meetings, handover documentation
C. An annual audit only

**7. Why are method statements written with the crew rather than for them?**

Answer:

**8. Precast stair cores replacing temporary ladders is an example of…**

A. Administrative control
B. Prevention through design
C. PPE

*End of module examination.*

# Module 3 examination — Mining safety requirements

**1. State the citation rule for Namibian mining safety documents taught in this module.**

Answer:

**2. Name the four classic mine hazard families.**

Answer:

**3. Fall-of-ground reporting is the mine's heartbeat because…**

A. It is a production metric
B. It is the earliest drift signal before collapse
C. Compensation demands it

**4. Health surveillance records are kept for decades because occupational disease latency is measured in…**

A. Days
B. Years to decades
C. Never; records expire annually

**5. Write the skeleton headings of a mine code of practice.**

Answer:

**6. A safety metric falls to zero. The professional response is…**

Answer:

**7. The interaction rule described in the Karibib example protects light vehicles by…**

A. Banning them from the pit
B. Beacons, headlights, radio logging, and give-way discipline at marked intersections with truck radio calls
C. Speed limits alone

**8. Working alone in unsupported or unventilated ground is…**

A. Permitted with a radio
B. Prohibited without exception
C. Permitted with a buddy on surface

*End of module examination.*

# Module 4 examination — Occupational hygiene and environmental monitoring

**1. Name the hygiene cycle stages in order.**

Answer:

**2. A static sample by a machine describes…**

A. The worker's exposure
B. The machine's environment, not the worker's
C. Nothing useful

**3. Why can a 12-hour shift double a TWA that looks compliant at 8 hours?**

Answer:

**4. Every OEL citation must carry…**

A. The laboratory's logo
B. Its source; limits differ by jurisdiction and list
C. A government stamp

**5. Write the commissioning sentence that would most likely ruin a silica survey if omitted.**

Answer:

**6. The control hierarchy for machine noise leads with…**

A. Ear plugs
B. Buy-quiet procurement, enclosure and maintenance
C. Audiometry

**7. Respirator programmes are the last line because…**

Answer:

**8. A monitoring report recommends only “issue ear plugs”. What is missing at the hierarchy level?**

Answer:

*End of module examination.*

# Module 5 examination — Contractor management

**1. Prequalification screens contractors on…**

A. Price and availability
B. Verifiable safety evidence: policy with accountable person, sampled competence, incident history with explanations, certification, references
C. A handshake

**2. A contractor with zero recorded incidents and zero explanations is most likely…**

Answer:

**3. List five safety terms a contractor contract should carry.**

Answer:

**4. The client's coordination duty…**

A. Transfers fully to the contractor on award
B. Cannot be delegated away; the client manages interfaces
C. Exists only for government works

**5. Verification differs from inspection because it checks…**

Answer:

**6. A stop-work right is only real when…**

A. It is written in bold
B. Using it is commercially and personally safe, demonstrated and recorded neutrally
C. The union enforces it

**7. What does a daily 07:10 coordination meeting sequence in the turnaround example?**

Answer:

**8. The post-contract review feeds…**

A. The invoice
B. The next prequalification shortlist
C. The marketing brochure

*End of module examination.*

# Module 6 examination — Root-cause investigation: ICAM fundamentals

**1. Define latent condition and active failure, with one example each.**

Answer:

**2. Name ICAM's four factor groups.**

Answer:

**3. The first question of a good investigation is…**

A. Who is responsible?
B. What made this act reasonable to this person at this moment?
C. What will this cost?

**4. A recommendation passes the board-ready test when it carries…**

Answer:

**5. State the three investigation failure modes.**

Answer:

**6. In the bagging-plant example, the cable tie kept on the machine was evidence of…**

A. Operator carelessness
B. A defeated defence normalised by daily practice under production pressure
C. A maintenance budget line

**7. Why did near-miss reporting triple after that investigation?**

Answer:

**8. A causal line may legitimately end at a genuine individual act only…**

A. Whenever convenient
B. Rarely, and never as an excuse to stop asking about the system around the act
C. When management says so

*End of module examination.*

# Module 7 examination — Auditing and inspection techniques

**1. Distinguish inspection, audit and verification.**

Answer:

**2. Convert: “The organisation shall maintain training records.”**

Answer:

**3. Triangulation means…**

A. Three auditors per finding
B. Comparing documents, interviews and observation; any two in conflict is itself a finding
C. Sampling three departments

**4. Define the four finding grades.**

Answer:

**5. A finding is written as three sentences:**

Answer:

**6. Why sample the edges, not the polished centre?**

Answer:

**7. Courtesy is an auditor's discipline because…**

A. It is polite
B. Audits that humiliate produce sites that hide, suppressing honest root causes
C. Clients like it

**8. The open-permit finding's fix in the worked example was…**

A. A new software system
B. A 15:45 permit close-out round, no cost
C. Discipline for the crew

*End of module examination.*

# Module 8 examination — Training of trainers

**1. Name the four adult-learning design tests.**

Answer:

**2. Backward design sequences…**

A. Content, then hope
B. Objectives, then checks, then the shortest content-and-practice path
C. Activities, then objectives

**3. A question you cannot answer should be…**

Answer:

**4. Give the counter-pattern for each: silence, derailing, cynicism.**

Answer:

**5. An objective written as “understand reporting” fails because…**

Answer:

**6. The instructor path at Oryx is…**

A. Apply and deliver immediately
B. Assist, co-deliver, observed sign-off, credentials verified
C. Certificate-only

**7. The training-of-trainers certificate means…**

Answer:

**8. In the mine-induction rebuild, first-month near-miss reporting rose because…**

A. Reporting became mandatory
B. Day one taught workers the site was interested in what they noticed
C. A bonus was paid

*End of module examination.*

# Assignment briefs and rubrics

## A. Management-system assignment (Module 1)

Undertake a documented gap analysis of an organisation against ISO 45001 principles, using either the supplied profile or your own employer with written permission. Deliverables: the clause-by-clause gap table with evidence; the risk-ranked top five gaps; a twelve-month programme for the top two gaps with owners, resources and measurement; and a one-page board summary. Due three weeks after the final module day. Confidential handling on request.

### Management-system assignment rubric

| Criterion | Not yet (0) | Developing (1) | Competent (2) |
|---|---|---|---|
| Evidence discipline (weight 25) | Assertions without evidence | Partial evidence, uncited | Every gap carries cited evidence from the profile or site |
| Coverage (weight 20) | Clause families missed | All families, thin treatment | All seven families with balanced depth |

| Criterion | Not yet (0) | Developing (1) | Competent (2) |
|---|---|---|---|
| Prioritisation (weight 20) | Listed without ranking logic | Ranked, logic unclear | Risk-and-effort ranking argued and defensible |
| Programme quality (weight 25) | Actions without owners or dates | Owners and dates present, measurement weak | Owners, resources, dates and measurement all present |
| Board summary (weight 10) | Long, unreadable | Adequate | One page a director can act on unaided |

## B. Practical audit report (Module 7)

Plan, conduct and report an audit of one safety procedure or system at your workplace or the supplied scenario: convert requirements to evidence questions, sample deliberately, triangulate, grade findings, and obtain root causes and actions from the auditee. Deliverables: the conversion sheet, sampling plan, findings log with gradings, and a two-page report with actions tracked to closure or scheduled. Due three weeks after the final module day.

### Practical audit rubric

| Criterion | Not yet (0) | Developing (1) | Competent (2) |
|---|---|---|---|
| Conversion (weight 20) | Requirements copied as questions | Partial conversion | Every requirement becomes a sharp evidence question with a sample |
| Sampling and triangulation (weight 25) | Convenience sampling only | Deliberate sampling, one evidence stream | Edge-case sampling across documents, interviews and observation |
| Findings (weight 25) | Opinions without requirement or evidence | Findings present, grading weak | Three-sentence findings, defensible gradings, root causes recorded |

| Criterion | Not yet (0) | Developing (1) | Competent (2) |
|---|---|---|---|
| Report and actions (weight 20) | Narrative, no actions | Findings and some actions | Two-page report; actions with owners and dates; closure tracked or scheduled |
| Professional conduct (weight 10) | Auditee ambushed or humiliated | Courteous but transactional | Courtesy, disclosure and closing meeting handled to standard |
