Document Control

This document is a controlled publication of the Oryx Safety Academy. The table below records its version, ownership and review status as required by the Oryx Safety Academy Curriculum Development, Research, Academic Writing and Publication Standards Manual.

Field	Record
Document title	Level 3 Instructor Manual
Document reference	OSA-L3-INSTRUCTOR-MANUAL
Version	V1.0
Publication date	November 2026
Author	Tangi Iigonda — Principal and Founder
Document owner	Oryx Polytechnic Institute · Oryx Safety Academy
Reviewer	Pending technical review by a qualified Namibian safety professional (to be appointed)
Approval status	Draft for internal review — not yet approved for commercial delivery
Last review date	November 2026
Next review date	Within 12 months of publication, or on enactment of the pending Occupational Safety and Health Bill

About this instructor manual

This manual accompanies the Level 3 Learner Manual and Workbook for a senior cohort. It covers the modular delivery plans, assignment administration, module examination handling, and the cohort dynamics of experienced practitioners. The tone for Level 3 is facilitation of peers: the room contains decades of site experience, and the instructor's craft is to convert it into course material rather than compete with it.

Field	Detail
Programme	Level 3 — Advanced Safety Management
Duration	Ten days, delivered as five two-day modules; modules may be taken separately
Cohort size	10 to 14 learners; smaller for the two-day modules where board-panel exercises run
Lead instructor	A Namibian safety professional with recognised credentials (Saiosh, SAMTRAC or equivalent). Specialist sessions, occupational hygiene surveying, ICAM casework, may be co-delivered with a qualified technical specialist, credited for their actual contribution.
Assessment	Eight module examinations (75% pass each), the management-system assignment, and the practical audit report. Rubrics in the assessment pack.

Module 1 SHEQ management systems and ISO 45001 principles — delivery plan (Two days)

Teaching notes

- The clause map is the anchor; draw it once and reference it for two days.
- The logistics-group profile needs full preparation time; its documents must be internally consistent because this cohort finds inconsistencies for sport.
- Gap-analysis presentations are challenged on ownership and measurement, never on presentation polish.

Discussion questions

- Where has a management review you attended actually changed a resource decision?
- What would your organisation's biggest single latent condition be, honestly?

Module 2 Construction safety requirements in depth — delivery plan (One day)

Teaching notes

- Method-statement surgery works only with a genuinely weakened document; resist fixing it for the groups.
- The prevention-through-design block should include one local drawing-office story; invite a designer if the cohort allows.
- Lifting plans: one page on the wall beats ten slides; mark up a real plan together.

Discussion questions

- What did your last design review change for safety, anything?
- Which temporary-works discipline fails first on your projects?

Module 3 Mining safety requirements — delivery plan (One day)

Teaching notes

- State the legal position once, precisely, and enforce the citation rule in every exercise thereafter.
- Mine-experienced learners will carry MHSA habits; honour the knowledge and sharpen the labelling.
- The zero-metric lesson in the Karibib example deserves its own ten minutes; it recurs in every mining career.

Discussion questions

- Which adopted benchmarks does your operation treat as law, and who decided?
- What would a Ministry verification letter change in your current documents?

Module 4 Occupational hygiene and environmental monitoring — delivery plan (One day)

Teaching notes

- Bring a real monitoring report, anonymised; reading one beats describing one.
- The TWA arithmetic should be worked on the board with the cohort's own shift patterns.
- OEL sources: the labelling discipline from Modules 1 and 3 recurs; keep the standard high.

Discussion questions

- Where does your organisation measure instead of assume, and where the reverse?
- What would a redesigned survey change in the last report you commissioned?

Module 5 Contractor management — delivery plan (One day)

Teaching notes

- The three dossiers need two days of preparation; the theatrical one must be genuinely seductive.
- The prequalification panel's reveal is the module's pivot; let the room feel the catch.
- Contract clauses exercise: insist on enforceability discussion, not drafting elegance.

Discussion questions

- Which contractor interface on your site is currently nobody's problem?
- When did a stop-work right last survive a schedule pressure, anywhere you know?

Module 6 Root-cause investigation: ICAM fundamentals — delivery plan (Two days)

Teaching notes

- The two-day format exists for this module; protect it from schedule erosion.
- The scenario pack's six interviews must contradict each other naturally; real witnesses do.
- Board-panel rejections that survive argument are rewrites, and the cohort should hear that framing before presenting.
- Name Reason's model and ICAM accurately; the cohort will have met both, sometimes badly taught.

Discussion questions

- Which of the three failure modes does your organisation's last serious investigation fall into?
- What is the most dangerous cable tie on your site?

Module 7 Auditing and inspection techniques — delivery plan (One day)

Teaching notes

- The audit exercise's seeded folder must contain exactly two defects; more buries the lesson.
- Grade-defence arguments are the learning; let them run.
- Courtesy discussion lands hardest with auditors who have been audited badly; invite those stories first.

Discussion questions

- What did your last internal audit find that management resented?
- Where does your audit programme sample only the polished centre?

Module 8 Training of trainers — delivery plan (One day)

Teaching notes

- The assessed segments are scheduled across the day; timekeeping must be surgical and kind.
- Feedback training is the assessed half; model one feedback exchange before the first segment.
- The instructor-path briefing should be honest about the credential requirement; ambition needs accurate signage.

Discussion questions

- Who taught you the safety habit you value most, and how?
- What would you teach differently tomorrow because of this programme?

Assignment and examination administration

Module examinations: sat at the end of each module block, 8 questions, 30 minutes, closed book. Marked within two working days; results recorded on the register. A failed module examination is re-sat on a parallel form within thirty days; the parallel forms are held with the answer key.

Assignments: the management-system assignment (Module 1 brief) and the practical audit report (Module 7 brief) are submitted three weeks after the final module day, marked against the published rubrics within ten working days. Submissions are handled as controlled documents until returned. Where a learner audits their own employer, the submission is treated as confidential and the marker discloses any conflict of interest.

Moderation: before first commercial delivery and annually, a competent person other than the author reviews the examinations, keys, rubrics and a sample of marked work. The senior cohort's marking is double-sampled for the first two deliveries. Results within five working days of each component's completion.
