WELCOME

SafeMan Basic Life Support, CPR & Choking Responder

SafeMan Basic Life Support, CPR & Choking Responder — Theory + Manikin Practicum. This SafeMan course is engineered for corporate audit readiness against: NTA Unit Std 843 & 844; GN 156 Reg. 228–232; ISO 45001 Cl. 8.2.

REGULATORY DISCLOSURE — READ FIRST

SafeMan™ is a proprietary inter-organizational safety management and operational competency benchmark developed by Oryx Institute (safeman.oryxinstitute.org). Courses are engineered in alignment with ISO 45001:2018, ISO 14001:2015, ISO 31000, ILO-OSH guidelines, and pre-referenced against Namibia Training Authority (NTA) Unit Standards and Namibian Government Notice 156 of 1997 for corporate audit readiness. SafeMan credentials verify industry competency and attendance between organizations and are non-NQA credit-bearing.

How to use this module pack

Work through the modules in order. Each module states its focus and the key points you are expected to carry into practice. Diagrams referenced as web assets accompany the online reader at safeman.oryxinstitute.org. After the modules, sit the knowledge check: 12 questions, pass mark 70%, closed book.

This is a practicum course: after passing the knowledge check you must complete the assessor practicum checklist with a qualified assessor before your SafeMan credential is issued. A practical demonstration video slot is reserved in the online reader for every module.

MODULES

Module 1 — Chain of survival & scene safety

The out-of-hospital chain of survival and making yourself the second casualty's prevention, not its cause.

Key points

Chain: early recognition and call, early CPR, early defibrillation, advanced care, post-arrest care.

Scene check: hazards to self, bystanders, then the casualty — electricity, traffic, gas, water, machinery.

DRABC: Danger, Response, Airway, Breathing, CPR/Circulation.

Send a specific person for the AED: point, name, task.

Diagram: /assets/webp/sm-first-aid.webp

Practical video recording scheduled — follow the step-by-step illustrated checklist below.

Module 2 — Adult CPR 30:2 & AED

Compression mechanics at 100–120 per minute with a 30:2 cycle, and safe, fast AED use.

Key points

Centre of chest, 5–6 cm depth, full recoil, 30 compressions to 2 breaths.

Rate 100–120/min — the beat of classic disco tempo, not faster.

AED: power on, pads per diagrams, clear for analysis, clear before shock, resume immediately after.

Two-minute cycles; swap compressors at cycles to protect quality.

Diagram: /assets/webp/sm-first-aid.webp

Practical video recording scheduled — follow the step-by-step illustrated checklist below.

Module 3 — Choking & recovery position

Airway obstruction grades and the escalation from cough encouragement to back blows and abdominal thrusts, then the recovery position.

Key points

Mild obstruction: encourage coughing, stay with them.

Severe obstruction: 5 back blows between the shoulder blades, then up to 5 abdominal thrusts, alternating.

Unconscious choking casualty: lower to floor, start CPR.

Recovery position: airway open, stable, monitored — head tilted, knee braced, face toward the ground.

Diagram: /assets/webp/sm-first-aid.webp

Practical video recording scheduled — follow the step-by-step illustrated checklist below.

ASSESSMENT

Knowledge check

The closed-book knowledge check draws 12 questions from the bank reproduced in Appendix A. Pass mark 70%. Your SafeMan credential is issued after the knowledge check and the practicum sign-off, and remains valid for 24 months from issue.

Assessor Practicum Checklist — Basic Life Support

Pass standard: All steps signed off by a qualified assessor on a manikin.

1	Scene hazard check performed and gloves donned before contact.	
2	2-minute continuous chest compression and rescue-breath cycle on manikin at 100–120/min, depth 5–6 cm, full recoil.	
3	Safe AED pad application with clear-for-analysis and clear-for-shock calls made audibly.	
4	Choking back-blows and abdominal thrust technique demonstrated on the trainer vest.	
5	Casualty placed correctly in the recovery position with airway maintained.	

Assessor name, role/qualification and company are captured on the sign-off screen of the SafeMan platform and bound into the QR-verified certificate record.

APPENDIX A — QUESTION BANK

Knowledge check bank

Q1. Adult compression rate is:

A. 60–80/min

B. 100–120/min

C. 140–160/min

D. As fast as possible

Q2. Adult compression depth is:

A. 2 cm

B. 3 cm

C. 5–6 cm

D. 8–10 cm

Q3. The adult CPR cycle is:

A. 15:2

B. 30:2

C. 50:5

D. 10:1

Q4. First action on reaching a collapsed casualty:

A. Start CPR

B. Check danger, then response

C. Fetch water

D. Call the family

Q5. Before the AED analyses rhythm you must:

A. Keep touching the casualty

B. Clear everyone from contact

C. Remove the pads

D. Turn it off

Q6. Severe choking escalation order:

A. Thrusts then back blows

B. 5 back blows then up to 5 abdominal thrusts

C. Water and patting

D. Finger sweep blind

Q7. Mild choking is managed by:

A. Immediate thrusts

B. Encouraging coughing

C. Lying them flat

D. CPR

Q8. If a choking casualty becomes unconscious:

A. Wait for EMS standing

B. Lower to floor and start CPR

C. Give water

D. Leave them seated

Q9. The recovery position's purpose is:

A. Comfort

B. Keeping the airway open and drainage safe

C. Faster transport

D. Better photos

Q10. Chain of survival step 3 is:

A. Early CPR

B. Early defibrillation

C. Hospital admission

D. Rehabilitation

Q11. Compression position is:

A. Upper abdomen

B. Centre of the chest, lower half of the sternum

C. Left side of chest

D. Over the ribs

Q12. Swapping compressors every 2 minutes prevents:

A. Boredom

B. Fatigue-driven quality collapse

C. Infection

D. Battery drain
