WELCOME

SafeMan Mining, Quarrying & Mineral Processing Masterclass

SafeMan Mining, Quarrying & Mineral Processing Masterclass — Sector Masterclass. This SafeMan course is engineered for corporate audit readiness against: Ministry of Industries, Mines and Energy rules; GN 156; ISO 45001.

REGULATORY DISCLOSURE — READ FIRST

SafeMan™ is a proprietary inter-organizational safety management and operational competency benchmark developed by Oryx Institute (safeman.oryxinstitute.org). Courses are engineered in alignment with ISO 45001:2018, ISO 14001:2015, ISO 31000, ILO-OSH guidelines, and pre-referenced against Namibia Training Authority (NTA) Unit Standards and Namibian Government Notice 156 of 1997 for corporate audit readiness. SafeMan credentials verify industry competency and attendance between organizations and are non-NQA credit-bearing.

How to use this module pack

Work through the modules in order. Each module states its focus and the key points you are expected to carry into practice. Diagrams referenced as web assets accompany the online reader at safeman.oryxinstitute.org. After the modules, sit the knowledge check: 6 questions, pass mark 70%, closed book.

MODULES

Module 1 — Mining hazards: PDS zones, blast clearance & dust

The interaction risks that define Namibian mining and quarrying: machines versus people, blasting, and respirable dust.

Key points

Proximity Detection Systems (PDS) around haul trucks: exclusion zones, alerts, and never walking under a raised load.

Blast clearance: exclusion radius, sentries, clearance sign-off and re-entry only after clearance declaration.

Silica and uranium dust: engineering suppression, wet methods, respiratory protection programmes with fit testing.

Quarry faces: scaling, bench stability, stand-off distances, and the fall-of-ground discipline.

ASSESSMENT

Knowledge check

The closed-book knowledge check draws 6 questions from the bank reproduced in Appendix A. Pass mark 70%. Your SafeMan credential is issued after the knowledge check, and remains valid for 24 months from issue.

APPENDIX A — QUESTION BANK

Knowledge check bank

Q1. PDS exclusion zones exist to prevent:

A. Theft

B. Machine–pedestrian interaction fatalities

C. Noise

D. Dust

Q2. Re-entry after blasting happens:

A. After 5 minutes

B. Only after the declared clearance and inspection

C. At shift end

D. When dust settles visibly

Q3. Silica dust control relies first on:

A. Masks

B. Engineering suppression and wet methods

C. Rotating workers

D. Signs

Q4. Uranium-bearing dust requires:

A. No special care

B. Radiation-grade controls per NRPA

C. Only gloves

D. Only sunglasses

Q5. Quarry scaling removes:

A. Overburden only

B. Loose rock from faces before work below

C. Topsoil

D. Water

Q6. Walking under a raised load is:

A. Fine with a spotter

B. Never permitted

C. Allowed with hard hat

D. Supervisor's call
